In the first part of this two part series on inductance calculation techniques, classical methods are developed for solving for the inductance of structures in closed-form.

### **Numerical Methods for Inductance Calculation**

As a result, most of the complex formulae were put into table form in order to make hand calculation easier. I wanted to use a spreadsheet to do the calculations, and so I began to research the literature to find the original formulae from which these tables were derived. Some of them were given explicitly in Grover's book, while some others required a lot more digging. Many of the underlying formulae were series expansions of elliptic integral formulae or other similarly intractable formulae.

count, simplification of the calculation is possible. Pre-viously, some simplified calculation methods were presented [3, 4]; however, one of them is a method that uses existing dc inductance calculating tools, another seems not to lead to the expected result. We cannot find reports that present consistent procedures with reproducible results.

**Formulas and tables for the calculation of the inductance**

Like all formulas for the inductance of circuits composed of straight filaments, formula (3) is a closed expression, but in certain cases it is poorly adapted to numerical calculations.

**Computerized Calculation of Leakage Inductance Values of**

low leakage inductance values are desirable, there are certain power electronic arrangements (e.g., resonant topologies and power sources for laser beam generation [1]), which require first of all a defined leakage inductance value of the applied transformer. In the case of existing transformers, leakage inductance can be determined by measurements.
