Shadows and branched shadows of 3 and 4 manifolds

The theory of shadows of 3 and 4-manifolds represents a bridge between combinatorics of polyhedra and low-dimensional topology. On the one hand, it allows a purely combinatorial approach to the study of smooth 4-manifolds and, on the other, it indicates relations between old-standing problems in group theory and recent topological results on 4

Stable maps and branched shadows of 3 manifolds Springer

In [7, Theorem 3.1.7] and [10, Proposition 3.4], Costantino described an algorithmic procedure to obtain a branched shadow from an arbitrary shadow through a finite sequence of moves. As a consequence, any pair of a compact orientable 3-manifold with no spherical boundary components and a (possibly empty) link in it has a branched shadow.
